

## LME78\_2.0 series

Wide Input Non-Isolated & Regulated, Single Output

- ⊕ High efficiency up to 96%
- ⊕ Operating temperature range:  
-40°C ~ +100°C
- ⊕ Short circuit protection (SCP)
- ⊕ High voltage input range,  
up to 36V
- ⊕ 3PIN SIP package
- ⊕ Non isolated
- ⊕ Very low standby current
- ⊕ UL94V-0 package material

## Switching Regulator

Introducing our high-efficiency LME78\_2.0 series, designed to deliver up to 96% efficiency and operate within a broad temperature range of -40°C to +100°C. Housed in a compact 3PIN SIP package, this non-isolated converter is ideal for applications requiring a high voltage input range, accommodating up to 36V. It features robust short circuit protection (SCP) and boasts very low standby current, ensuring energy efficiency even when not in active use. Constructed from UL94V-0 package material, it meets stringent safety standards, making it a reliable choice for a wide range of applications.

Common specifications	
Short circuit protection:	Hiccup, automatic recovery
Thermal impedance:	34°C/W, MIN Mounting at FR4 (1.18*1.18inch) PCB
Cooling:	Nature convection
Operation temperature range:	-40°C~+100°C (see temperature derating curve)
Storage temperature range:	-55°C ~+125°C
Soldering temperature:	260°C MAX, 1.5mm from case for 10 sec
Maximum case temperature:	105°C
Storage humidity range:	< 95%RH
Package material:	Plastic [UL94-VO]
MTBF (MIL-HDBK-217F @25°C):	• 5VDC input: 16Mhrs, min • 24VDC input: 2.6Mhrs, min
Safety standard (design to meet):	IEC/EN 60950-1, IEC/EN 62368-1
Weight:	2.4g
Dimensions:	14 x 7.5 x 10.1mm

### Note:

1. Do not operate exceeding the absolute maximum rating, it will cause damage;
2. Operation under no-load conditions will not damage these devices, however they may not meet all listed specifications;
3. Unless otherwise specified, data in this datasheet should be tested under the conditions of Ta = 25°C, humidity <75% when inputting nominal voltage and outputting rated load;
4. All index testing methods in this datasheet are based on our company's corporate standards;
5. Specifications subject to change without prior notice.

## Typical characteristics

## Test configurations

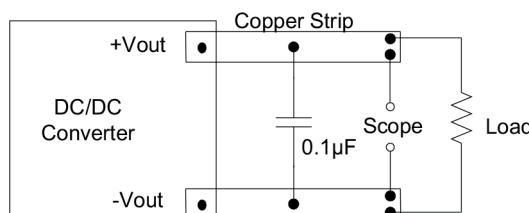

### Input reflected ripple current test step:

Input reflected ripple current  $I_{\text{RIPPLE}}$  is measured through a source indicator  $\text{Lin}$  ( $12\mu\text{H}$ ) and a source capacitor  $\text{Cin}$  ( $10\mu\text{F}$ ,  $\text{ESR} < 1.0\Omega$  at 100KHz) at nominal input and full load.

### Output ripple & noise measurement test:

Measured with a  $0.1\mu\text{F}$  ceramic capacitor. The scope measurement bandwidth is 0-20MHz.

## EMC countermeasures

### EMI countermeasures

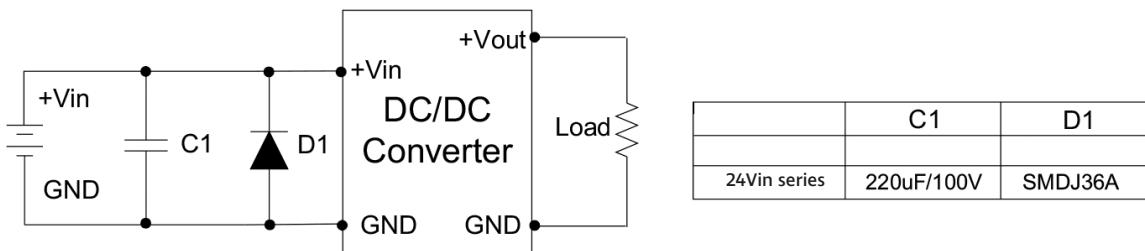

Input filter components (C1, C2, C3, L1) are used to help meet EMI requirement for the module. These components should be mounted as close as possible to the module; and all leads should be minimized to decrease radiated noise.

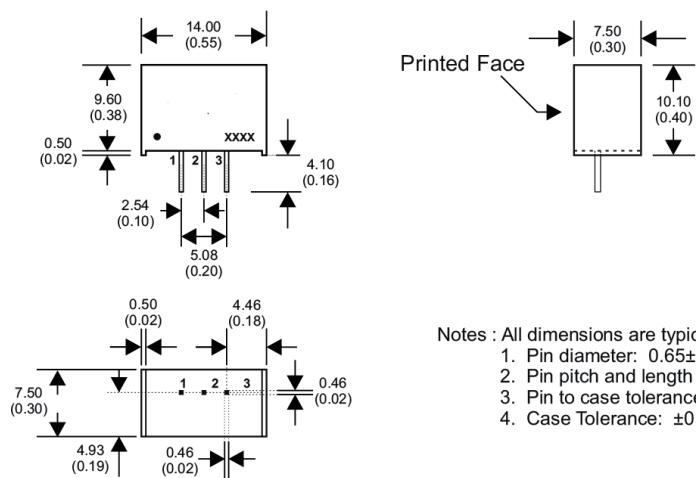

### EFT / Surge test countermeasures

Filter suggestion:

24Vin models: Nippon - chemi - con KY series, 220μF/10V and a TVS, 3KW, 36V
