IRFP3077PbF

V _{DSS}	75V
R _{DS(on)} typ.	2.8mΩ
max.	3.3 m Ω
D (Silicon Limited)	200A①
D (Package Limited)	120A

Applications

- High Efficiency Synchronous Rectification in SMPS
- Uninterruptible Power Supply
- High Speed Power Switching
- Hard Switched and High Frequency Circuits

Benefits

- Worldwide Best RDS(on) in TO-247
- Improved Gate, Avalanche and Dynamic dV/dt Ruggedness
- Fully Characterized Capacitance and Avalanche SOA
- Enhanced body diode dV/dt and dI/dt Capability

Notes:

- ① Calculated continuous current based on maximum allowable junction temperature. Bond wire current limit is 120A.Note that current limitations arising from heating of the device leads may occur with some lead mounting arrangements. (Refer to AN-1140)
- ② Repetitive rating; pulse width limited by max. Junction temperature.
- ③ Limited by T_{Jmax} , starting T_J = 25°C, L = 0.028mH, R_G = 50 Ω , I_{AS} = 120A, V_{GS} =10V. Part not Recommended for use above this value.
- ⑤ Pulse width ≤ 400μs; duty cycle ≤ 2%.
- © Coss eff. (TR) is a fixed capacitance that gives the same charging time as Coss while V_{DS} is rising from 0 to 80% V_{DSS}.
- \odot Coss eff. (ER) is a fixed capacitance that gives the same energy as Coss while V_{DS} is rising from 0 to 80% V_{DSS} .
- ® R_θ is measured at T_J approximately 90°C.

Notes on Repetitive Avalanche Curves, Figures 14, 15: (For further info, see AN-1005 at www.irf.com)

- 1. Avalanche failures assumption: Purely a thermal phenomenon and failure occurs at a temperature
- far in excess of Timax. This is validated for every part type. 2. Safe operation in Avalanche is allowed as long as Timax is not exceeded.
- 3. Equation below based on circuit and waveforms shown in Figures 16a. 16b.
- 4. P_{D (ave)} = Average power dissipation per single avalanche pulse.
- 5. BV = Rated breakdown voltage (1.3 factor accounts for voltage increase during avalanche).
- 6. I_{av} = Allowable avalanche current.
- 7. ΔT = Allowable rise in junction temperature, not to exceed Timax (assumed as 25°C in Figure 14, 15).

t_{av} = Average time in avalanche.

D = Duty cycle in avalanche = tav ·f

 $Z_{thJC}(D, t_{av})$ = Transient thermal resistance, see Figures 13)

 $P_{D (ave)}$ = 1/2 (1.3·BV·I_{av}) = $\Delta T/Z_{thJC}$ $I_{av} = 2\Delta T / [1.3 \cdot BV \cdot Z_{th}]$ $E_{AS (AR)} = P_{D (ave)} \cdot t_{av}$

TO-247AC Package Outline (Dimensions are shown in millimeters (inches))

NOTES:

DIMENSIONING AND TOLERANCING AS PER ASME Y14.5M 1994.

DIMENSIONS ARE SHOWN IN INCHES.

CONTOUR OF SLOT OPTIONAL.

DIMENSION D & E DO NOT INCLUDE MOLD FLASH, MOLD FLASH SHALL NOT EXCEED .005" (0.127)
PER SIDE. THESE DIMENSIONS ARE MEASURED AT THE OUTERMOST EXTREMES OF THE PLASTIC BODY.

THERMAL PAD CONTOUR OPTIONAL WITHIN DIMENSIONS D1 & E1.

LEAD FINISH UNCONTROLLED IN L1.

OP TO HAVE A MAXIMUM DRAFT ANGLE OF 1.5 * TO THE TOP OF THE PART WITH A MAXIMUM HOLE DIAMETER OF .154 INCH.

OUTLINE CONFORMS TO JEDEC OUTLINE TO-247AC .

Information

For further information on the product, technology, delivery terms and conditions and prices please contact your nearest Infineon Technologies office (www.infineon.com).

Warnings

Due to technical requirements products may contain dangerous substances. For information on the types in question please contact your nearest Infineon Technologies office.

The Infineon Technologies component described in this Data Sheet may be used in life support devices or systems and or automotive, aviation and aerospace applications or systems only with the express written approval of Infineon Technologies, if a failure of such components can reasonably be expected to cause the failure of that life support, automotive, aviation and aerospace device or system or to affect the safety or effectiveness of that device or system. Life support devices or systems are intended to be implanted in the human body or to support and/or maintain and sustain and/or protect human life. If they fail, it is reasonable to assume that the health of the user or other persons may be endangered.
